DEELOCAL

1601 Marys Avenue
Pittsburgh, PA 15215

Dear hiring team,

I was very excited about applying to be an intern with Gecko Robotics when I saw the posting for the "Summer 2025 Engineering Internship" because it is exactly the type of internship experience I am looking for: an opportunity to work hands-on with a variety of projects that have a great intersection between art and engineering.

My name is Aragya Goyal and I am a Junior Engineering student at the University of Pittsburgh Swanson School of Engineering. My major is in Computer Engineering with a focus in Autonomous Systems. In addition to over 6 years building robots and other things, I have a diverse skillset ranging from hardware and low level electronics to high level software development. This has given me a unique ability to work on many multidisciplinary projects (as a lot of Deeplocal's are). Recently, I have also started taking a course called Creative Coding where we build art pieces through the Arduino platform and I have found it to be enjoyable as it allows for me to invent, build, and shape my own projects.

I love working on engineering problems and creating things that can inspire those around me or create a positive impact in the world. My work at the Carnegie Mellon Robotics Institute has always consisted of continually challenging myself to work through problems and achieve solutions which has made me very capable of working on large-scale projects with large teams.

I love the uniqueness of the projects at Deeplocal and how they all make me go "Holy s*** that's sick." I am very enthusiastic about the possibility of interning with Deeplocal and would greatly appreciate the opportunity to interview. Please find my resume attached, which details my qualifications for the position. If you have any questions, please do not hesitate to contact me. Thank you for your time and consideration.

Sincerely,

Aragya Goyal
